**BACK CUT TECHNOLOGY**  
The rear of the blades are sharpened. If there is no pass through, the blades roll forward and cut coming out. Blades are .032" stainless steel and silent in flight.

**AIRFOIL AERODYNAMICS**  
The patented concave scoop design creates an airfoil that eliminates wind planing for field point accuracy. On impact, the airfoil science of Ramcat continues to work by moving body mass outward and away from the broadhead body and arrow shaft.

PATENT NO: US 8,210,971 B1

**BLADE OVER SHAFT TECHNOLOGY**  
Blades are cantilevered over the arrow shaft and offset in the broadhead body creating a devastating vortex cut and results in the most aerodynamic broadhead on the market.

FIELD-POINT ACCURACY IS STANDARD WITH OUR PATENTED CONCAVE-SCOOPED TIP.

CANTILEVERED BLADES PROVIDE INCREASED CUT, PENETRATION AND ACCURACY.

TWO O-RING SYSTEM ELIMINATES THREAD SLIP SO BROADHEAD REMAINS 100% CONCENTRIC.

REAR SHARPENED BLADES ROTATE FORWARD WHEN BROADHEAD MOVES REARWARD IN AN ANIMAL OR PULLED FROM A TARGET.
