TECHNOLOGY

FIELD-POINT ACCURACY IS STANDARD WITH OUR PATENTED CONCAVE-SCOOPED TIP.

CANTILEVERED BLADES PROVIDE INCREASED CUT, PENETRATION AND ACCURACY.

TWO O-RING SYSTEM ELIMINATES THREAD SLIP SO BROADHEAD REMAINS 100% CONCENTRIC.

REAR SHARPENED BLADES ROTATE FORWARD WHEN BROADHEAD MOVES REARWARD IN AN ANIMAL OR PULLED FROM A TARGET.

BACK CUT TECHNOLOGY

The rear of the blades are sharpened. If there is no pass through, the blades roll forward and cut coming out. Blades are .032" stainless steel and silent in flight.

AIRFOIL AERODYNAMICS

The patented concave scoop design creates an airfoil that eliminates wind planing for field point accuracy.

On impact, the airfoil science of Ramcat continues to work by moving body mass outward and away from the broadhead body and arrow shaft.

PATENT NO: US 8,210,971 B1

FIRENOCK AERO CONCENTRIC TECHNOLOGY

This two O-ring system on the threaded shank eliminates any thread slop and guarantees the broadhead is 100% concentric in the insert.

BLADE OVER SHAFT TECHNOLOGY

Blades are cantilevered over the arrow shaft and offset in the broadhead body creating a devastating vortex cut and results in the most aerodynamic broadhead on the market.

THE HYDROSHOCK

WHETHER YOU PREFER PIVOTING BLADES, FIXED BLADES, OR NEED SOMETHING SPECIAL IN A SMALL GAME OR MECHANICAL, ALL RAMCAT BROADHEADS FEATURE THE PATENTED AIRFOIL TIP FOR PRECISION ACCURACY AND DEVASTATING PENETRATION.

THE DIAMONDBACK HYBRID IS THE PERFECT COMBINATION OF A DEPENDABLE FIXED BLADE DELIVERING A GUARANTEED 7/8" CUT AND A PAIR OF MECHANICAL BLADES CREATING A DEVASTATING 2+'' WOUND CHANNEL.
